

**Bid Round 59**  
**Questions & Answers**

Jevne Bulk Plant (Former)  
Commerce # 54501-9999-20-A  
DNR BRRTS # 02-44-544091

Question: Line item 2, “per ton excavation, disposal and backfill cost x700 tons,” should include contractor costs and consultant costs, correct?

Answer: Yes

Question: Line item 2—Are we to list the cost per ton, or the total cost for 700 tons?

Answer: Total cost for 700 tons.

Question: Line item 5—Are we to list the cost per well per sampling event, or the total cost to sample 9 wells for 4 events?

Answer: Total cost to sample 9 wells for 4 events.

Question: Does the consultant need to be pre-approved to excavate more than 700 tons (up to 900 tons) prior to beginning the excavation, or will the bid cap simply be modified up (or down) based on scale receipts, assuming the total amount excavated is less than 900 tons?

Answer: No preapprovals needed for excavated amounts less than 900 tons. Bid should be for 700 tons. We will modify cost cap if final excavated amounts are more or less than 700 tons. No separate approvals needed unless you will exceed 900 tons.

Question: Does Commerce want water levels collected from each well during the groundwater monitoring from the wells being sampled? Any additional wells?

Answer: With the exception of the potable wells, Commerce will need water levels to be collected from all sampled wells during each sampling event and these measurements will be used to create the required flow maps. Other than the replacement for MW-1 no additional wells will be added.

Question: Should bidders assume the replacement well will need to be surveyed into the existing well network?

Answer: Yes, the replacement for MW-1 must be surveyed into the existing well network.

Question: The bid mentions that future monitoring rounds may have reduced scope because Commerce may consider eliminating specific wells or specific analyses. Will the cap be adjusted downward should this be the case?

Answer: Yes, however, if the changes are minor or if there are other contemporaneous adjustments to the bid SOW, a downward bid cap modification may not be necessary.
